

Easy Cinnamon Rolls

INGREDIENTS:

8 ounce tube crescent rolls
 ¼ cup butter, melted, divided
 ¼ cup brown sugar, packed
 2 tablespoons ground cinnamon
 1 cup powdered sugar
 2 tablespoons milk

Preheat oven to 375°. Butter 8 or 9" round cake pan. Open crescent rolls and pinch seams together to make large rectangle. Brush ½ of melted butter over dough. Sprinkle with brown sugar and cinnamon. Roll tightly from long end of rectangle. With serrated knife, cut into 8 rolls. Place in prepared pan. Bake 10-12 minutes or until tops are lightly browned. Stir together remaining butter, powdered sugar and 2 tbsp milk to make icing. Spoon icing over rolls just out of oven. Serve rolls warm.

ONE LINERS

I finally got my head together, now my body is falling apart.

If all is not lost, where is it?

The first rule of holes: If you are in one, stop digging.

It was all so different before everything changed.

It's hard to make a comeback when you haven't been anywhere.

The only time the world beats a path to your door is if you're in the bathroom.

An unbreakable toy is useful for breaking other toys.

Average Americans will spend an average of 6 months waiting at red lights in their lifetime.

ANTI-AGING... FOR YOUR CAR

We seem to be an "anti-aging" society. Everywhere you look there is some commercial for an anti-aging herb or cream. They all promise to keep us looking and feeling years younger. Many consumers are proving it is more than possible not only with themselves but their cars too! They are keeping their cars going 200,000 miles and longer! How? By following the rule book...their owner's manual!

Yes...this truly is the most unread book by consumers but fortunately, those of us in the service and repair business do follow the rules. The rules are a basic outline of how many miles you can drive a vehicle before fluids or parts need to be replaced. It also takes into account your driving habits. Those who drive in stop and go traffic put a bigger strain on their vehicle so that is considered "severe" driving. Your car will need to be serviced more frequently than those who zip along the highways with no need for frequent stops.

It pays to be consistent with your car's service! Many think it is okay to delay or even skip an oil change all together. Your engine may not blow up at the moment you go over the recommended mileage but it does accelerate the engine wear and can cause premature engine damage. Driving your car on fumes instead of filling up before the warning signal comes on isn't good for your vehicle either. Using the right fluids and the right parts are vitally important to keep your car from aging. The wrong weight oil or the wrong transmission fluid won't help your car stay young.

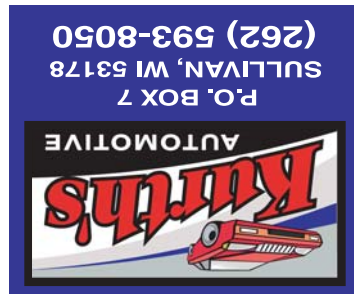

If you want to keep your car from aging, keep it clean and keep it serviced in timely intervals. You and your car can have a long and happy life together!

I HEAR IT ALL THE TIME...

"I REALLY LIKE MY CAR BUT IT IS GETTING CLOSE TO 100K MILES, SO I HAVE TO START LOOKING FOR ANOTHER ONE."

NOT TRUE!

PREVENTIVE MAINTENANCE
will keep you together a long, long time!

With proper care and preventive maintenance, some cars have gone way past 400,000 miles. Many of the 1950's and 1960's Hot Rods that collector's cherish so much are still going strong and there are many more other models out there doing the same.

ALL IT TAKES IS SOME T.L.C.!

A car is highly complex with many components and each of these components has a lifespan. If taken care of, the lifespan can be extended. Many cars have exceeded 400,000 miles and according to Wikipedia some have even reached 1,000,000 miles. For many of these, the efforts of maintenance have not been excessively costly. Here is a list by Joseph Younger (author of "How to keep your car going....and going." AAA's Car & Travel Magazine).

"10 SECRETS" FOR LONG CAR LIFE

1. Regular oil changes
2. Monitor key fluids
3. Maintain the Transmission
4. Change Plugs when required
5. Watch and Care for Belts
6. Do not forget the Radiator
7. Remember the Filters
8. Fight Rust
9. Know & Use your maintenance Manual
10. Drive Conservatively

ECONOMICALLY SPEAKING

Even if your car needs to have a transmission rebuild, you would still save more money than if you bought a new transmission. It would extend the life of your car, increase fuel efficiency and reduce carbon emissions (Kasmer, wikipedia.org). Keeping a car past 200,000 miles can save you up to \$30,000 dollars or more, versus buying a new car every 3 to 5 years.

Today's cars are built better than in past years; rust proofing, advanced motor oils and better engineered engines make keeping your car a long time a good choice financially.

YOUR OWNER'S MANUAL

Follow your owner's manual's scheduled maintenance list. **DO NOT** put off service and repairs. Cars, Pick-Ups and SUVs can all last a long time if you follow the manual's recommendations.

If you cannot find your owner's manual or are not sure what services are needed and when, just ask us. We have the ability to track your owner's manual's maintenance schedule electronically for you. We are glad to help.
